It's All Here

**Step 1:** Remove the new Mesh Device from the box and place it on a desk or table. Remove the clear plastic covers from the device—do not block vents.

**Step 2:** Place the Mesh Device near the router, and use the provided power cord to connect the POWER socket to an appropriate power source.

**Step 3:** Once the POWER light is solid, press and hold the WPS button on your router for about 5 seconds. When you let go, the WPS light should be flashing orange.

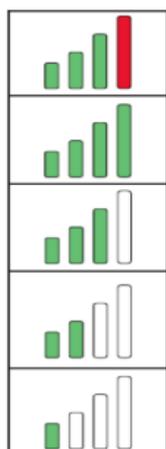

If flashing green, wait about 3 minutes; once it shuts off, repeat step 3. If it flashes green again, please call 877.290.0560.

**Step 4:** Once the WPS light on the router is flashing orange, press and hold the WPS button on the back of the Mesh Device for about 5 seconds to begin the pairing (syncing) process. The four WiFi Backhaul lights on the top of the Mesh Device will flash green.

**Step 5:** Once paired, the four WiFi Backhaul lights will show one red and three green. Unplug the Mesh Device from power and move to the desired location. Plug the device into an appropriate power source and note the four lights on top:

*The Mesh Device is too close to the router.*

*The Mesh Device is a bit close yet, but will work.*

*The Mesh Device placement is optimal.*

*The Mesh Device will produce adequate results.*

*The Mesh Device is too far from the router.*

**Step 6:** Complete our online form at [arvig.net/selfinstall](https://arvig.net/selfinstall) to complete the setup process. Or, call Arvig Technical Support at 877.290.0560 for assistance. We're also available via online chat at [arvig.net](https://arvig.net).

**Verify your new internet speed by testing it at [speedtest.arvig.com](https://speedtest.arvig.com).**
